

Sample Cleaning Summary

The cleaning summary includes:

- A breakdown of the Match Types (graphically and textually)
- Summaries of the characteristics and amendments made to the records within each Match Type

The first page of the Cleaning Summary gives a graphical and textual breakdown of the Match Types assigned by Batch. Thus it is possible to see how many addresses have been cleaned and what types of amendments have been made.

The second page of the Cleaning Summary contains a breakdown of the characteristics and amendments within each Match Type.

The final page contains a glossary that details what the main Match Types mean.

23/01/2004		Summary Report		Page 5 of 5	
Session	New session				
Source Database	C:\Program Files\Qas\Quickaddress Batch\Sample\G brsamp				
Country Database	United Kingdom (Default)				
Date Batched	23 Jan 2004 12:19				
<p>Glossary</p> <p>Verified The supplied address has been verified as effectively correct, although minor corrections or formatting changes may have been applied. Records in this category have been assigned an R or Q match type at confidence level 9.</p> <p>Good A full address match has been located. Batch is confident in its choice of match despite differences in content between supplied and matched addresses. Records in this category have been assigned an R or Q match type at confidence level 9.</p> <p>Tentative Batch has found a full address match, but the overall differences between the supplied and matched address elements are overly significant for Batch to have complete confidence in the address located. Records in this category have been assigned an R or Q match type at confidence level 5.</p> <p>Partial Batch has not been able to find a full address match, but has found a partial match by skipping any leading address information that could not be matched. The degree of partiality of the return address may be derived from the full match code. Records in this category have been assigned an O or P match type at confidence levels 0, 5 and 9.</p> <p>Others Corresponds to the remaining records. In addition to low confidence full address matches, categories include multiple, foreign and unmatched match types. Note that Interactively Accepted and Interactively Rejected records are excluded.</p> <p>Total Covers all records regardless of match category (including Interactively Accepted and Interactively Rejected match types).</p>
